

## HUNKELER CURRENCY SUCTION SYSTEM HCSS

### DESCRIPTION

The Hunkeler Currency Suction System HCSS is a custom-made solution for secure destruction, extraction and briquetting of bank notes. The different bank note sorting machines in the industry are inline connected with the Hunkeler suction system. A powerful briquetting system is compacting the waste and optimizes the logistics further down the work process.

### OPERATION

During the production, and later on in the quality check process, the Hunkeler HCSS is inline connected to the production and sorting machines. All of the sensitive waste is directly transported with the air suction system to the buffer of the briquetting system and from there the material is compacted into briquettes.

### ADVANTAGES

The Hunkeler Currency Suction System HCSS is a fully automated system and all the generate waste is transported with the Hunkeler suction system to the central waste station. The space saving system is designed with modular components and is fully flexibe to fit into the current production environment. The HCSS software workflow is controlling the system around the clock and is reporting and controlling all the operation performed on the line. At any given time the system can be extended with further sorting machines or with an offline feeding and shredding option to the Hunkeler HCDS system.
