

## THE NEW QR-CLASS SINGLE-SHAFT SHREDDER

### CONSTRUCTED FOR RECYCLABLE RESOURCES

**The new QR-class single-shaft shredder was developed for shredding recyclable resources. A robust drive system with a safety clutch is a special feature of this robust shredder.**

The new QR-class single-shaft shredder was developed in collaboration with trade and industry users. The main focus was on the construction of a maintenance-free system for efficient material shredding. A robust universal cutting system, built into a solid chassis, is driven by a heavy-duty engine equipped with a safety clutch. The gear is integrated in the drive. This means a much longer working life than with conventional machines. A multi-function hatch accesses the cutting unit. The hatch enables rapid emptying of the funnel and extraneous materials can be easily removed. The new QR-class single-shaft shredder is operated via a high definition touch-screen monitor.
